

Installing Jupyter Notebook via Anaconda

Follow these steps to download and install Anaconda, which includes Jupyter Notebook:

Step 1: Visit the Anaconda Website

- Open your web browser and go to [Anaconda's official website](https://www.anaconda.com/).

Step 2: Download Anaconda

- On the homepage, click on "**Free Download**" in the top-right corner.
- You will be redirected to the **Anaconda Distribution** download page.
- If prompted, you can choose to **skip registration**.

Step 3: Choose the Correct Version

- Select the appropriate version for your operating system (Windows, macOS, or Linux).
- Click **Download** to get the installer.

Step 4: Install Anaconda

- Once the download is complete, open the installer and follow the on-screen instructions:
 - For **Windows**: Run the `.exe` file and follow the setup wizard.
 - For **macOS**: Open the `.pkg` file and proceed with the installation.
 - For **Linux**: Use the command line to run the downloaded `.sh` file.

Step 5: Open Jupyter Notebook using Anaconda Navigator

- After installation, open **Anaconda Navigator** from your Start menu (Windows) or Applications folder (macOS).
- In **Anaconda Navigator**, find **Jupyter Notebook** and click **Launch**.

Step 6: Open Jupyter Notebook using Terminal or Command Prompt

- If using the command line, open a terminal (Command Prompt on Windows or Terminal on macOS/Linux) and type:

```
jupyter notebook
```

- This will open Jupyter Notebook in your default web browser.
